When I say "5G Testing"...

... what do you think about?

Yes! This is the one!

Do you speak Software-ese?

▲ Let's look at a domain that is getting closer: Software.

▲ What are they testing?

- Unit testing
- Integration testing
- Component interface testing
- **System testing**
- **Operational Acceptance testing**

Extensive coverage of ALL the system

End-to-End Testing Ecosystem

Transport

- Deployment scenarios
- Carrier-grade SDN
- SLA/B2B services

Services

- Business Integrations
- Dynamic QoS
- Integrated vs CDN

Mobile App

- Live in-the-wild
- Connected behavior
- Device coverage

EPC

- Deployment configurations
- Network conditions
- Subscription levels

Device

- Power consumption
- Compliancy
- Chipset Performance

RAN

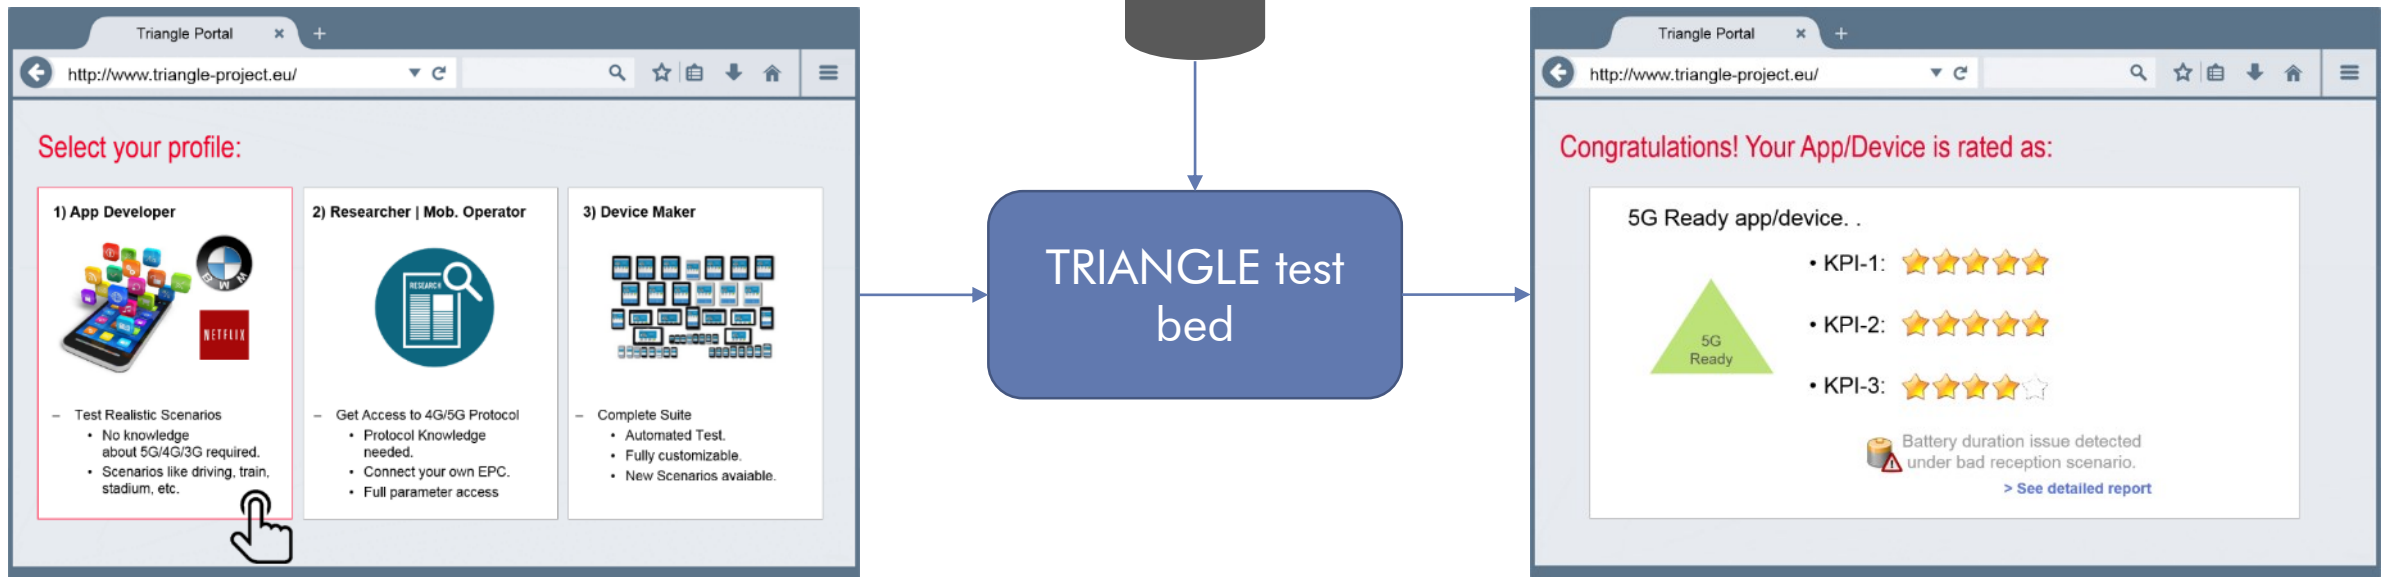

- New Waveforms
- RAN configuration
- Deployment scenarios

Fitting specific interests

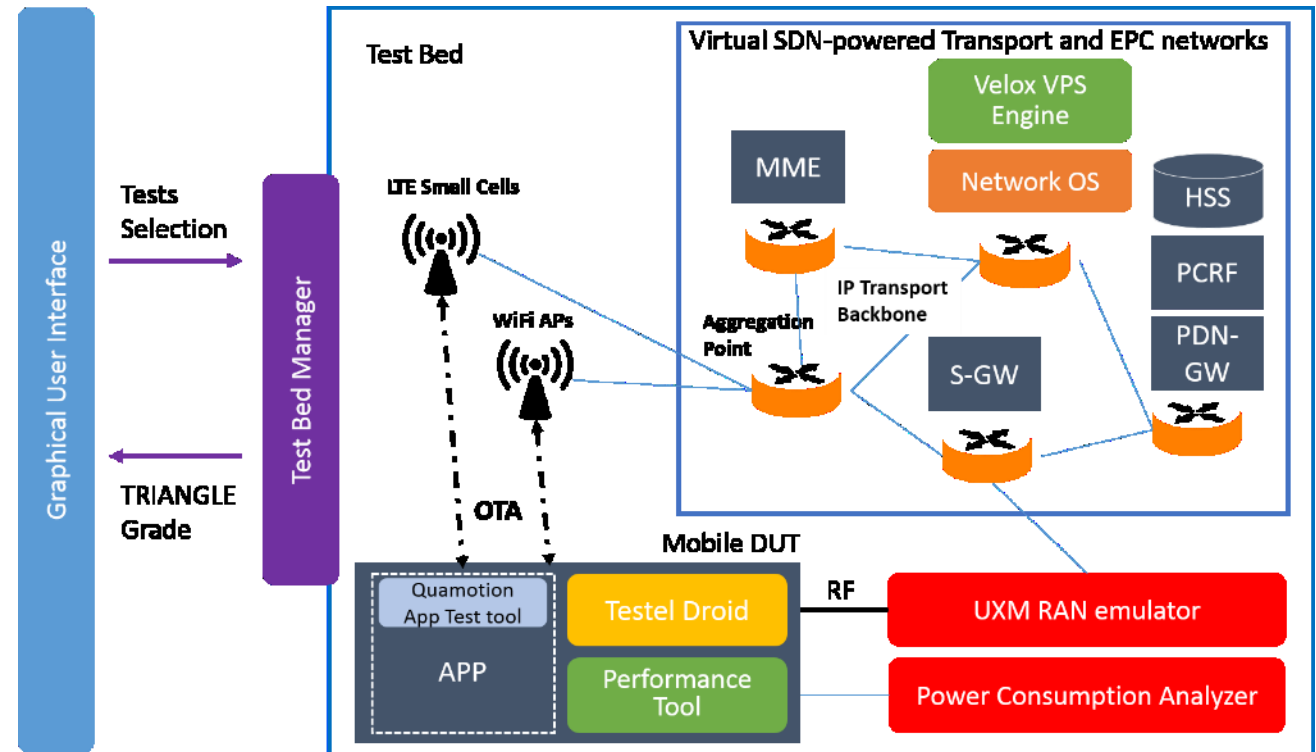

Pre-brewed configurations
defined by TRIANGLE
experts

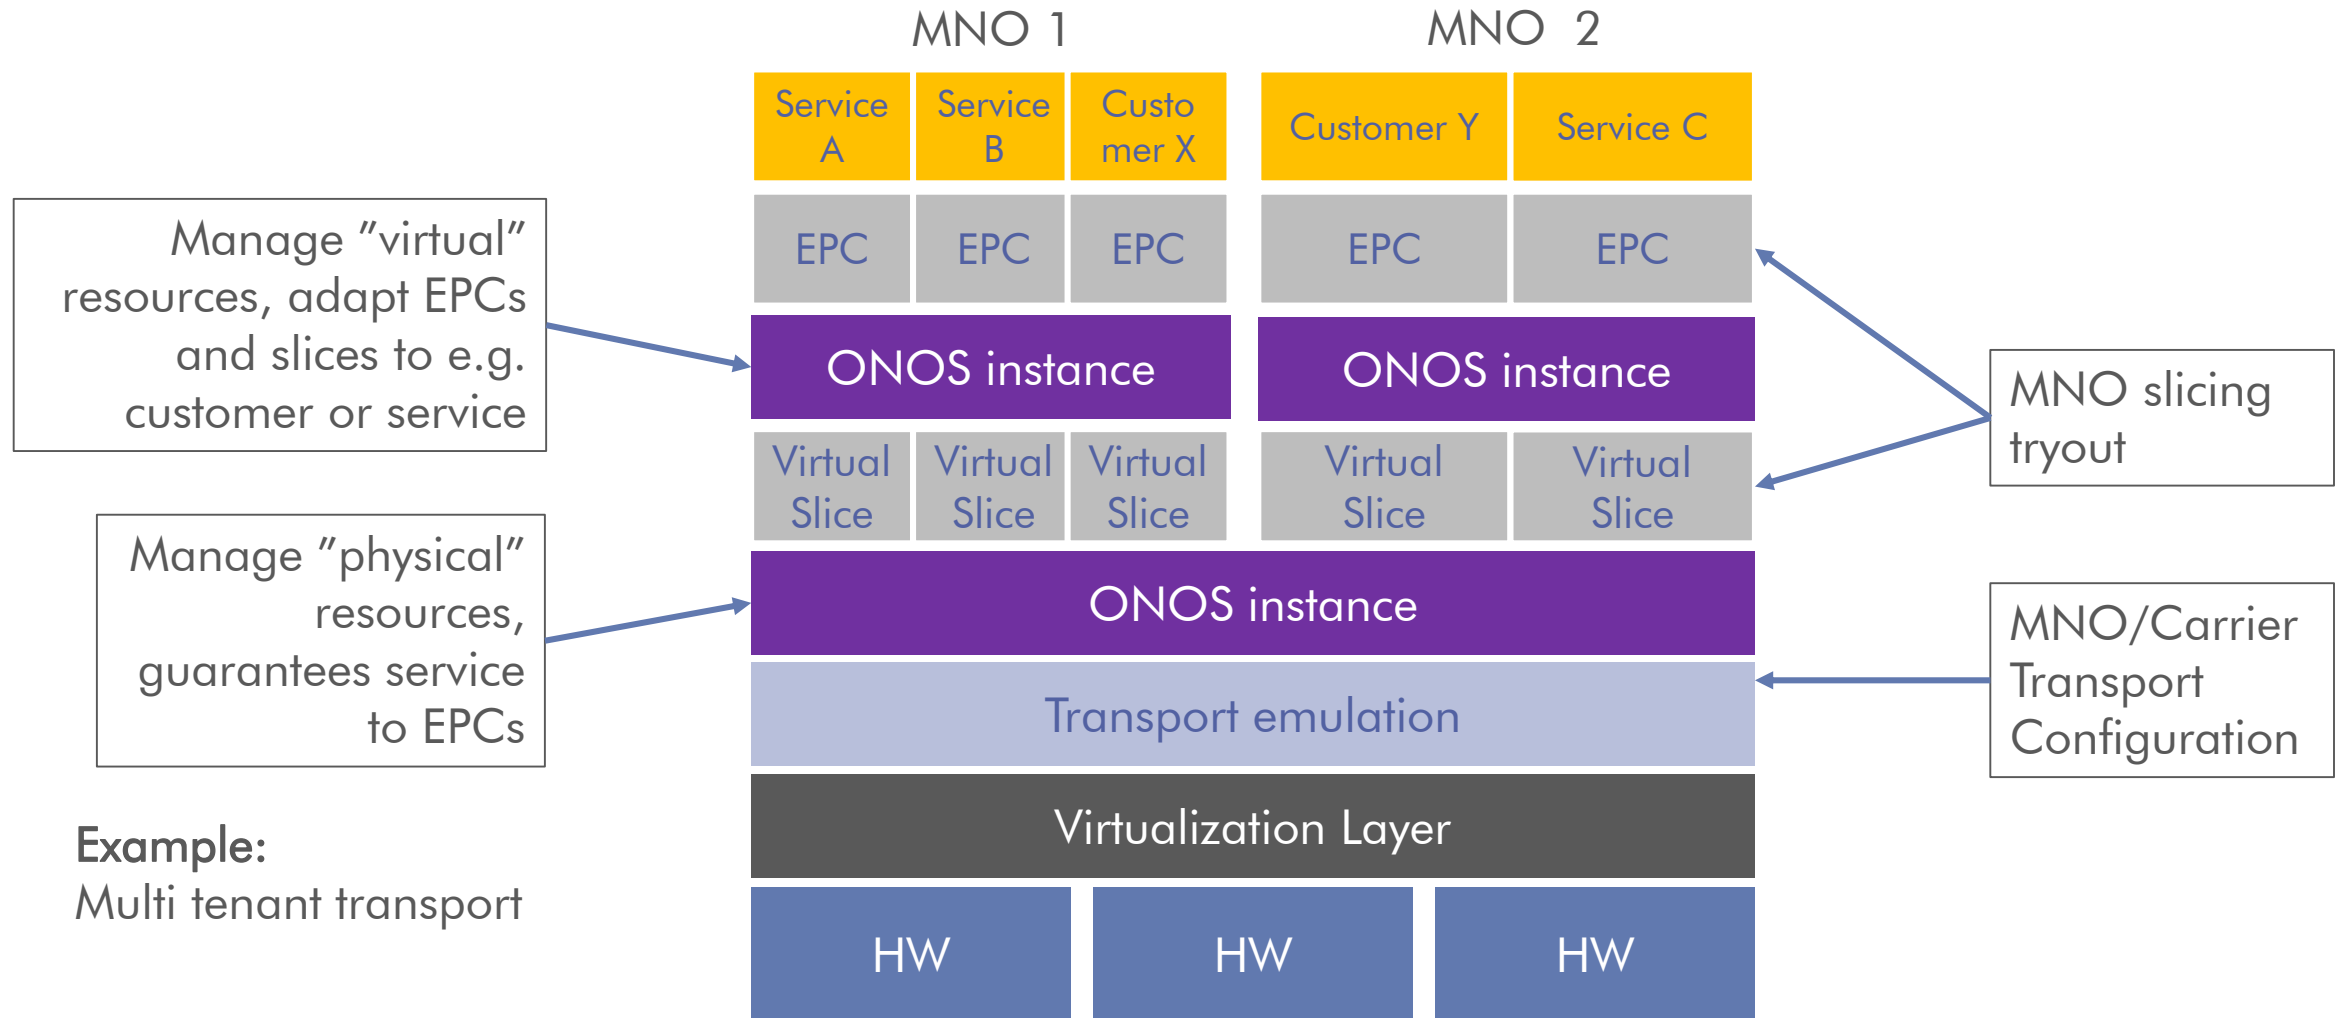

The Test Bed - Testing Possibilities

- Higher level scenario testing (e.g. crowded café, high speed train)
- Hardware testing (RF, power consumption)
- Capacity testing (call box)
- RAN configuration testing
- EPC stress test
- SDN algorithm and configuration test
- Transport or slice configuration test
- Service testing

Currently based on 4G and its evolution, expected final architecture

What is the benefit for MNOs

Who we are

The project

- ▲ "5G Applications and Devices Benchmarking" – TRIANGLE
- ▲ Co-funded by the **Horizon 2020** Framework Program of the EU
- ▲ Started Jan-1st 2016
- ▲ Expected duration of 3 years
- ▲ Six partners: 2 Industrial, 2 SMEs, 2 Academia

The EU Framework

- ▲ **Horizon 2020** is a financing scheme for supporting European research.
- ▲ **5G-PPP** Projects are financed under the same umbrella.
- ▲ **FIRE** is a branch of the program financing massive test bed activities.

Project Partners

This project has received funding from the *European Union's Horizon 2020 research and innovation programme* under grant agreement No 688712

Wishlist

- ▲ Is E2E testing a valid approach that can be absorbed by the telco industry?
- ▲ What would you, especially MNOs, require from a 5G certification process?
- ▲ What would convince companies to use the test bed service?
 - Device manufactures?
 - Network Operators?
 - Network Vendors?
- ▲ Which 5G forward leaning features should we implement to be more attractive?
- ▲ If it was a commercial Test-as-a-Service (TaaS), would it be a piece to include in your business model?
